Casino Game Logs Audit Report –Feb 2011

The Directors

PartyGaming Plc

This is to confirm that iTech Labs has examined the casino game logs in the gaming system of PartyGaming for the month of **February 2011** as recorded by the respective game servers. iTech Labs has calculated the Return To Player (RTP) for all the games using the data from the game logs.

The table below lists the actual calculated RTPs for real money games played at the PartyGaming game servers. The PartyGaming game servers service the following internet gaming sites:

www.partycasino.com   www.empirepoker.com   www.azartiacasino.com   www.fivecasino.tv
www.gamebookers.com   www.wptcasino.com   www.getminteddownload.com

Game Type Description	RTP
Table casino	98.91%
Roulette	97.75%
Blackjack	97.66%
Single deck blackjack	97.28%
Table poker	95.70%
Video poker	94.84%
Slots	94.34%
Jackpot slots	91.87%
Top Trumps	90.77%
Keno	90.74%
Other games combined*	97.13%
All games combined	95.13%

*   Other games combined include Racing, Scratch, Hi Lo games, Live
     Dealer Baccarat, Live Dealer Blackjack and Live Dealer Roulette.

There were a large enough number of game records to give the RTP calculations sufficient statistical power. The actual RTPs are greater than normally required by gaming jurisdictions. For all card games, the actual RTPs are very close to the maximum theoretical expectation.

The actual RTPs shown above are percentages of total actual winnings to bets for each game type. They do not reflect outcomes for individual games or future games. iTech Labs has done limited sanity checks to verify the integrity of the game logs. iTech Labs also maintains a copy of the game logs for verification purposes.

The scope of the review did not include reviews of financial controls or casino operations. We believe that the RTPs were calculated correctly from the game logs based on the actual bets and winnings.
